HARSH SRIVASTAVA

CYBERSECURITY PRODUCT TESTING | TECHNICAL TROUBLESHOOTING | TEST AUTOMATION

+91-9140686604 | harshvns0102@gmail.com | linkedin.com/in/harsh-srivastava-896bb6167

PROFESSIONAL SUMMARY

Cybersecurity-focused Test Automation Engineer with 5+ years of experience at Seceon Inc. testing endpoint protection and detection products and automating product-validation workflows. Experienced in investigating reproducible product issues, validating security detections and response behaviour, analyzing logs, and working with engineering teams to improve release quality. Strong hands-on background in Java, Selenium, TestNG, Maven, API testing with Postman, Git, and Jenkins, with ongoing learning in Playwright and TypeScript. Interested in applying product-testing and troubleshooting skills to security-product support, escalation analysis, and customer issue reproduction.

CORE SKILLS

Cybersecurity product testing: EDR/EPP/XDR validation, endpoint protection behaviour, malware-detection and false-positive validation, quarantine/remediation workflows, web filtering, policy validation, regression testing

Troubleshooting & investigation: Issue reproduction, log review, defect isolation, evidence collection, root-cause investigation support, release verification, Jira defect reporting

Automation & QA: Java, Selenium WebDriver, TestNG, Maven, Page Object Model, hybrid automation frameworks, JavaScript/TypeScript fundamentals, Playwright learning

API, CI/CD & tools: Postman, REST API validation, Jenkins, Git, GitHub, Bitbucket, SQL, Jira, cross-browser testing, Agile/Scrum

Platforms & security context: Windows endpoint testing, Linux basics, SIEM/EDR integration context, security event validation, malware/attack-technique test scenarios

PROFESSIONAL EXPERIENCE

Senior Test Automation Engineer | Seceon Inc. | October 2020 – Present

- Test and validate Seceon endpoint-security capabilities, including EDR/EPP workflows, web content filtering, quarantine/remediation, policy enforcement, and detection behaviour.
- Investigate product defects by reproducing issues, reviewing relevant logs and configuration, collecting evidence, and documenting clear steps and expected-versus-actual results in Jira.
- Validate detection outcomes against clean and suspicious test samples, including false-positive scenarios involving legitimate installers, administrative commands, and deployment workflows.
- Build and maintain Selenium WebDriver automation using Java, TestNG, Maven, and reusable framework patterns to support functional and regression testing.
- Perform API checks with Postman and validate backend/UI behaviour across product workflows; collaborate with engineering teams on defect triage and release verification.
- Test web-filtering behaviour across browsers and validate allow/block policies, custom domain rules, and AI-tool blocking scenarios; support repeatable reporting of pass/fail outcomes.
- Contribute to release readiness by executing regression suites, checking fixes against reported defects, and communicating product risks and test findings to stakeholders.
- Use Git-based workflows and Jenkins where applicable to support source control and repeatable test execution; continue expanding browser automation skills with Playwright and TypeScript.

SELECTED PROJECTS

Web Filtering Automation Tool (Seceon EPP): Designed automation workflows to validate URL categories and allow/block outcomes across Chrome, Edge, and Firefox, with pass/fail reporting and Jira-ticket workflow support for failed cases.

Endpoint Protection False-Positive Validation: Built and executed validation scenarios for clean software installers and legitimate administrative/deployment commands to identify incorrect quarantine or process-termination behaviour.

Selenium Hybrid Automation Framework: Developed reusable UI automation using Java, Selenium WebDriver, TestNG, Maven, Page Object Model, and reporting utilities for repeatable regression coverage.

EDUCATION

B.Tech, Computer Science & Engineering | Dr. A.P.J. Abdul Kalam Technical University (AKTU) | 2020
